PROFESSIONAL SUMMARY

Informatics student at President University with a concentration in Artificial Intelligence, passionate about developing AI-driven solutions and software applications. Experienced in building web-based and database-driven systems using PHP, MySQL, and Laravel, with project experience in Computer Vision, NLP, and AI-powered applications. Proficient in Python, JavaScript, SQL, and modern development tools such as Git/GitHub and Figma. Quick to adapt to new technologies, strong in problem-solving, and eager to contribute to innovative AI and software engineering projects in a professional environment.

EDUCATION

Bachelor of Informatics - Artificial Intelligence

09/2024 – Present

President University

- GPA : 3.69/4.00
- Related courses: Artificial Intelligence, Machine Learning, Deep Learning, Natural Language Processing (NLP), Computer Vision, Database Systems, Software Engineering, Web Programming, and Data Structures & Algorithms.

SKILLS

Technical Skills

- Programming Languages: Python, Java, PHP, C++, SQL
- AI & Machine Learning: Scikit-learn, TensorFlow, Deep Learning, Neural Networks, Natural Language Processing (NLP), Computer Vision
- AI System Development: LangChain, Hugging Face Transformers, Vector Embeddings, ChromaDB, Prompt Engineering
- Data Science & Analytics: Pandas, NumPy, Matplotlib, Data Preprocessing, Data Visualization, Big Data Processing
- Web & Software Development: Laravel, JavaScript, REST API, MySQL, Git/GitHub
- Tools & Platforms: Jupyter Notebook, Google Colab, VS Code, Figma, Cisco Packet Tracer

Interpersonal Skills

- Logical and structured thinking
- Detail-oriented in data and information management
- Strong teamwork and collaboration skills
- Responsible for system and application management
- Adaptive to new technologies quickly

PROJECTS

Food Predictor & Nutrition Tracker

09/2025 – 10/2025

AI Engineer & Backend Developer

- Python - TensorFlow - Keras - CNN - Streamlit - Deep Learning
- Developed an Deep Learning-powered web application using Streamlit that classifies food images in real-time and calculates exact nutritional intake (calories, protein, fat, carbs) based on customizable portion sizes.
- Trained and integrated Convolutional Neural Network (CNN) models (including ResNet50V2 and EfficientNetBo) using TensorFlow and Keras to achieve high-accuracy visual food recognition across diverse image conditions.
- Architected an end-to-end inference pipeline combining robust image preprocessing, tensor manipulation, and a prediction engine to deliver sub-second food classification results.
- Built a smart dietary recommendation system utilizing data structures (Pandas) and fuzzy string matching to dynamically map predicted food labels to a custom nutritional database for intelligent food pairing and timing.

Smart AI Image Editor

09/2025 – 10/2025

Computer Vision Engineer & Backend Developer

- Python - OpenCV - Flask - NumPy - Deep Learning (DNN)

- Developed a comprehensive web-based image processing application using Flask, providing an interactive UI for real-time image manipulation, undo/redo state management, and file operations.
- Implemented core computer vision algorithms using OpenCV and NumPy, including spatial filtering (Gaussian, Median, Sobel, Laplacian), histogram equalization, and geometric transformations.
- Integrated advanced AI features utilizing OpenCV's Deep Neural Network (DNN) module for Neural Style Transfer and deployed the rembg library for automated, high precision background removal.
- Engineered an automated color correction pipeline utilizing the Gray World algorithm to dynamically balance image colors, fix lighting inconsistencies, and remove color casts.

Finance Manager: Secure Personal Finance & Subscription Reminder Application

01/2025 – 02/2025

Mobile Developer

- Java – Android Studio – Firebase Auth – Cloud Firestore – MPAndroidChart
- Developed a native Android application in Java to streamline personal finance tracking, featuring comprehensive ledger systems for income, expenses, and savings goals.
- Integrated secure authentication using Firebase Auth and implemented a real-time data sync pipeline with Cloud Firestore to ensure persistent user records across sessions.
- Architected interactive visual reports using MPAndroidChart and built an automated background reminder system using Android's AlarmManager for upcoming bills and subscriptions
- Enhanced overall application performance and visual polish by integrating smooth asynchronous loading states using Facebook's Shimmer animations.

ORGANSATIONAL IEXPERIENCE

President University Faculty Association (BEM)

09/2024 – Present

VICE CHAIRPERSON

- Computer Science
- Sourced and secured sponsorships for events organized by PUFA Computer Science.
- Managed the sales of official Computer Science faculty merchandise (CompScie Merch).
- Curated and published student business ideas through the PUFA Computer Science Instagram feed.
- Organized and executed Company Visit events for Faculty of Computer Science students.
